

ASSETjourney for Aged Care

ASSETjourney

The Asset Management Plan created by and for aged care operators.

Aged Care operators must adhere to strict accreditation quality standards, specifically Standard 5, an Organisation’s Service Environment, such that all residents feel safe and comfortable in their environment. Requirement 3(b) provides that furniture, fittings, and equipment must be safe, clean, and well-maintained.

Operators need to assess and plan which assets they have and where they are located, as well as track resident opinions on assets. They must ensure maintenance and repairs are completed in a timely manner and up-to-date records are kept for review by accreditors.

ASSETjourney provides what operators need to be compliant!

ASSETjourney has three critical elements that assist with compliance:

- Asset Register
- Maintenance Tasks
- Reporting

The three aspects of the program work together to deliver the tools that operators need to manage assets and stay compliant.

1

ASSET REGISTER

The software allows you to create and maintain a comprehensive record of assets. An import template aids in populating the database while additional tools, both on the desktop and in mobile, allow quick and easy updates.

2

MAINTENANCE TASKS

The Maintenance Tasks provides operators with the necessary tools for maintaining, repairing, and replacing assets, including estimated and actual costs.

3

REPORTING

The software’s robust reporting capabilities make it easy to generate the required reports and provide them to all interested groups.

Reports include:

- Asset Register
- 3 Year and 10 Year Maintenance Plans
- Actual Maintenance and Repairs of Assets
- Asset Location
- Asset Replacement Decisions

Other Components

ASSETjourney expands on its Asset Management Plan with a Work Order Management system. Whether right away or further down the line, ASSETjourney can grow with you as your needs evolve.

◆ Work Order Management

The Work Order system gives operators a full-featured program to track and manage both preventative and reactive maintenance.

Maintenance and repairs can be assigned and tracked with due dates and escalations. Recurring tasks can be generated automatically. Operators can record the time, cost, and parts used in each task, which updates the reports.

◆ Third-Party Integrations

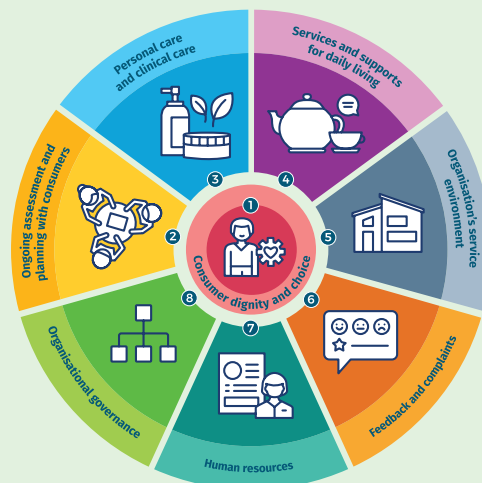

ASSETjourney can connect to many third-party systems such as ERPs, resident databases including Compago, aged care software, and other maintenance programs.

ASSETjourney runs in Microsoft Office 365

- Easy to install and use
- No additional logins required
- Leverages the power of Office 365

A Comprehensive Solution for Operators

With the pressure to meet compliance regulations, many operators are looking for a solution. With ASSETjourney, operators can rest easy knowing that implementing this solution will allow them to meet the requirements with a program that provides all the required elements.

Go with the program created by and for Aged Care Operators!
